You must get tested.
In the past, you did not protect yourself when you needed to. For a moment, you did worry about becoming pregnant or catching a sexually transmitted disease (STD). But nothing happened. And life went on. Besides, you thought, girls like you don’t get STDs. But, they do. Now is the time to find out.

Most teens and young adults who have chlamydia (one of the most common STDs) do not show any symptoms.
So, the only way for you to know is to be tested. Ask your doctor to test you for chlamydia today. Your future depends on it.
Chlamydia can cause painful and permanent damage to your pelvic and sex organs.

• For females, you could end up infertile, unable to have children.
  • And if you are pregnant, you can give chlamydia to your baby during childbirth, causing eye infections and pneumonia.

If you are one of the few who show symptoms
When infected here are the signs to look for:
• Burning or painful urination.
• Vaginal discharge with a bad odor.
• Urinating more often.
• Bleeding between periods or after sex.
• Cramps or pain in belly (lower abdomen), sometimes with fever or nausea.

Love's Horror-scope

If all the Signs Point to Yes Control Your Destiny

Chlamydia is on the rise.
And you may not know you have it.
Chlamydia can be cured.
But, you will need to be treated by your doctor.
• Take all your prescribed medicine.
• Tell your partner(s).
Males can also get chlamydia. So, it’s essential that your partner receive treatment as well or they could infect you again.
• Get checked again three or four months after treatment to make sure that you are cured.

You can live it up and enjoy life, but be responsible. Protect yourself and get tested. Your future is in your hands.
