Speech Therapy Services

Policy Number: MM.09.006
Original Effective Date: 08/01/2009

Line(s) of Business: HMO; PPO; QUEST Integration
Current Effective Date: 01/01/2015

Section: Rehabilitative Therapy (PT; OT; Speech)
Place(s) of Service: Office; Outpatient

I. Description
Speech therapy services include the diagnosis and treatment of communication impairment(s) and swallowing disorders. Services include speech/language therapy, swallowing/feeding therapy (dysphagia), aural rehabilitation therapy and augmentative/alternative communication therapy.

II. Criteria/Guidelines
A. Speech therapy for communication impairments and swallowing/feeding disorders is covered only when all of the following criteria are met:
   1. Therapy is necessary to treat function lost or impaired by disease, trauma, congenital anomalies (structural malformation) or prior therapeutic intervention.
   2. Therapy is ordered by a physician, physician's assistant, or advanced practice registered nurse who has established the patient's diagnosis
   3. Therapy is rendered by and requires the judgment and skill of a speech pathologist certified as clinically competent by the American Speech Language Hearing Association (ASHA)
   4. Swallowing therapy can be provided by either a certified speech therapist or an occupational therapist
   5. Therapy is provided on a one-to-one basis
   6. Therapy is used to achieve significant, functional improvement through specific diagnosis-related goal(s) documented in an individualized, written treatment plan of care with measurable objectives
   7. Training is provided to patient, family and/or caregiver(s) to facilitate their participation in and assumption of speech therapy, continued improvement and a maintenance program
   8. Therapy is short term, usually provided within a three month period
   9. Therapy does not duplicate services provided by any other therapy

B. Speech therapy services for aural rehabilitation are covered following implantation of a cochlear or auditory brainstem device when the following are met:
   1. Therapy is ordered by a physician, physician's assistant, or advanced practice registered nurse who has established the patient's diagnosis
2. Therapy is rendered by and requires the judgment and skill of a speech language pathologist certified as clinically competent by the American Speech Language Hearing Association (ASHA).

3. Therapy is provided on a one-to-one basis.

4. Therapy is used to achieve significant, functional improvement through specific diagnosis-related goal(s) documented in an individualized, written treatment plan of care with measurable objectives.

5. Training is provided to patient, family and/or caregiver(s) to facilitate their participation in and assumption of speech therapy, continued improvement and a maintenance program.

6. Therapy is covered when provided within the following limits:
   a. For children age 12 and younger, the number of covered visits is 10 the first year after surgery and four per year after the first year.
   b. For members age 13 and older, four visits per year will be covered.

7. Therapy does not duplicate services provided by any other therapy.

C. Speech therapy services for augmentative and alternative communication therapy are covered only for restorative services in conjunction with speech generating devices (SGD) when the following are met:

1. Therapy is necessary to treat function lost or impaired by disease, trauma, congenital anomalies (structural malformation) or prior therapeutic intervention.

2. Therapy is ordered by a physician, physician's assistant, or advanced practice registered nurse who has established the patient's diagnosis.

3. Therapy is rendered by and requires the judgment and skill of an appropriately licensed speech pathologist because of the member's condition and the complexity of treatment.

4. Therapy is provided on a one-to-one basis.

5. Therapy is used to achieve significant, functional improvement through specific diagnosis-related goal(s) documented in an individualized, written treatment plan of care with measurable objectives.

6. Training is provided to patient, family and/or caregiver(s) to facilitate their participation in and assumption of speech therapy, continued improvement and a maintenance program.

7. Therapy is short-term, usually provided within a three month period.

8. Therapy does not duplicate services provided by any other therapy.

III. Limitations

A. Speech therapy is not covered for the following conditions:

1. Psychosocial speech delay
2. Behavioral problems
3. Attention disorders
4. Neurologic deficits or mental disorders, either congenital or acquired, which would not benefit significantly with short-term speech therapy. These include conceptual/perceptual dysfunctions, including pervasive developmental disorders and mental retardation.
5. Psychoneurotic or psychotic conditions
6. Dysfunctions that are self-correcting, such as:
   a. Language therapy for young children with natural dysfluency; or
   b. Developmental articulation errors that are self-correcting.
7. Educational and occupational deficits to include learning disabilities and dyslexia.
8. Developmental delay defined as any significant lag in a child's physical, cognitive, behavioral, emotional, or social development, in comparison with norms.
9. Fluency disorders including lisping or stuttering
10. Speech problems complicated by bronchitis and laryngitis
11. Untreated conductive hearing loss

B. The following services are not covered:

1. Duplicate therapy. When patients receive both occupational and speech therapy, therapies should provide different treatments and not duplicate the same treatment. They must include separate treatment plans and goals with treatment occurring in separate treatment sessions and visits. This includes:
   Duplicate services available through schools and government programs. Speech therapy services may be available under a child’s individualized education program (IEP). An IEP should be completed before requesting coverage through HMSA.
2. Non-skilled services which do not require the intervention of a qualified provider of speech therapy services, such as:
   a. Treatments that maintain function by using routine, repetitious, and reinforcing procedures that are neither diagnostic nor therapeutic (e.g., practicing word drills for developmental articulation disorders) or
   b. Procedures that may be carried out effectively by the patient, family or caregivers
3. Maintenance therapy. Maintenance begins when the treatment goals have been achieved and when no further functional progress is apparent or expected to occur. A maintenance program consists of drills, techniques and exercises to preserve the patient's present level of function and prevent regression of that function
4. Group speech therapy
5. Electrical stimulation (E-stim/NMES) for swallowing/feeding disorders as it is not known to improve health outcomes
6. Swallowing/feeding therapy for food aversions because this is considered behavioral training and does not meet payment determination criteria
7. Any computer-based learning program for speech training purposes is not covered (e.g., Fast ForWord or other programs)
8. Treatment for central auditory processing disorder as it is not known to be effective based on scientific evidence. Only an initial evaluation is covered

IV. Administrative Guidelines

A. Evaluation services do not require precertification.
B. Precertification for treatment is required for members:
   1. Up to age 21 following an evaluation
   2. For adults, age 21 and older after 12 visits per calendar year
   3. Additional visits for aural rehabilitation beyond the limits in Criteria B.6.
   4. All QUEST Integration members regardless of age from the start of therapy (services are covered only when obtained from a participating QUEST Integration provider)
C. Documentation submitted must include an individualized, written treatment plan appropriate for the diagnosis, symptoms and findings of the speech therapy evaluation which clearly documents the medical necessity of the treatment.
   1. Specific statements of goals including a transition from one-to-one supervision to a patient, family member or caregiver upon discharge to a home maintenance program
   2. Measurable objectives intended to facilitate meaningful functional improvement;
   3. A reasonable estimate of when the goals will be reached;
   4. The specific treatment techniques and/or exercises to be used in treatment including those for use in a home maintenance program
   5. The frequency and duration of the treatment
   6. A treatment plan should be appropriately revised as the patient’s condition changes
D. A request for continuation of services must be submitted with an updated plan of care which documents measurable, significant improvement and clearly indicates a reduction in functional impairment when compared to normal or average function in the same or similar demographic.
E. Patients who want services that are not a covered benefit should be informed that they will be responsible to pay for the services. To prevent misunderstandings about financial responsibility, the provider may ask the patient to sign an Agreement of Financial Responsibility prior to performing the services.

Definitions:

1. Anomia - Word finding and word fluency disorders; inability to name or retrieve the appropriate word upon confrontation
2. Aphasia - Loss of language
3. Aphonia - Total loss of voice
4. Apraxia/dyspraxia - Inability to form words or speak, despite the ability to use the oral and facial muscles to make sounds
5. Aural rehabilitation - Services and procedures for facilitating adequate receptive and expressive communication in individuals with hearing impairment
6. Dysarthria literalis - Stuttering, also known as dysarthria syllabaria spasmodic
7. Dysphagia - Inability to swallow or difficulty with swallowing
8. Dysphasia - Impairment of speech resulting from a brain lesion, stroke or neurodevelopmental disorder
9. Dysphonia - Difficulty in vocal sounds; partial loss of voice
10. Fluency disorder - The abnormal flow of verbal expression; interruption of smooth flow of speech
11. Language impairment - Inability to comprehend and/or appropriately use language
12. Neurosensory hearing loss - A decreased ability to perceive sounds as compared to normal

V. Important Reminder

The purpose of this Medical Policy is to provide a guide to coverage. This Medical Policy is not intended to dictate to providers how to practice medicine. Nothing in this Medical Policy is intended to discourage or prohibit providing other medical advice or treatment deemed appropriate by the treating physician.

Benefit determinations are subject to applicable member contract language. To the extent there are any conflicts between these guidelines and the contract language, the contract language will control.

This Medical Policy has been developed through consideration of the medical necessity criteria under Hawaii’s Patients' Bill of Rights and Responsibilities Act (Hawaii Revised Statutes §432E-1.4), generally accepted standards of medical practice and review of medical literature and government approval status. HMSA determined that services not covered under this Medical Policy will not be medically necessary under Hawaii law in most cases. If a treating physician disagrees with HMSA's determination as to medical necessity in a given case, the physician may request that HMSA consider the application of this Medical Policy to the case at issue.
