**Definition**
Percentage of adults age 66 and older who had a medication review by a clinical pharmacist or prescribing practitioner in the measurement year.

**Plans Affected**
- Medicare D-SNP.

**Quality Programs Affected**
- CMS Star Ratings.

**Collection and Reporting Method**
- Hybrid claim/encounter data and medical record documentation.

This is a quick reference tool to help you with coding and documentation of Medicare Star Rating measures that close care gaps.

**Codes**

</tbody>
</table>

**Exclusions**

**Standard exclusions**

- Patients in hospice.
- Exclude services provided in an acute inpatient setting.

**Timeframe**

Anytime during the year.

**Medical Record Documentation**

**Test, service, or procedure to close the care gap**

- Medication review or dated clinician’s note that says the patient isn’t taking any medications.
- Medication list must be included in the medical record and medication review must be completed by a prescribing provider or clinical pharmacist.
- Documentation that the medications aren’t tolerated isn’t an exclusion for this measure.

**Medical record detail, any of the following:**

- Medication list.
- Progress notes.
- SOAP notes.
- Home health records.
- Health history and physical.
- Skilled nursing facility minimum data set (MDS) form.

HMSA will make the final decision about reimbursement when we receive a claim. Submitting a claim with a code from this document doesn’t guarantee payment. Payment of covered services depends on a patient’s plan benefits, your eligibility for payment, claim processing requirements, and your contract with HMSA.
Tips and Best Practices to Help Close the Care Gap

- Always clearly document the date of the medication review or note the absence of medications.
- The use of CPT Category II codes helps identify clinical outcomes such as medication reviews. It can also reduce the need for chart review.
- A medication review may be conducted with a patient over the phone if the clinician is a prescriber or clinical pharmacist. A registered nurse can collect the list of current medications from the patient during the call, but there must be evidence that the appropriate practitioner reviewed the list.
- The medication review should include all the patient’s medications, including prescription and over-the-counter medications and herbal or supplemental therapies.
- A medication list signed and dated within the measurement year by the prescribing practitioner or clinical pharmacist meets the criteria.
  - The practitioner’s signature and a medication list in the patient’s chart is considered evidence that the medications were reviewed.
